

Evidence-Derived Representation-to-Decision Framework

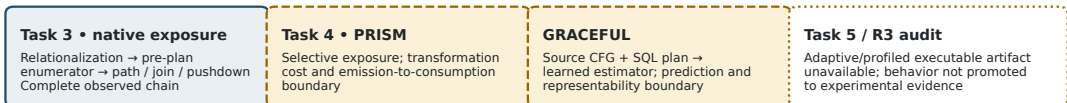

Optimization reach is governed by adequacy, decision-time consumability, and acquisition cost

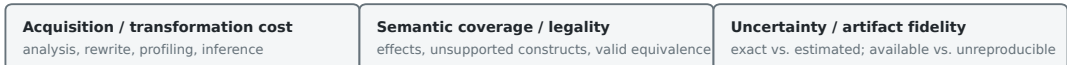

CONTROLLED ADEQUACY EVIDENCE

REPRODUCED MECHANISMS AND BOUNDARIES

CROSS-CUTTING BOUNDARIES

EVIDENCE-DERIVED SUMMARY / INTERFACE REQUIREMENTS — NOT A DEPLOYED OPTIMIZER

Definition-time $S_0(U) \rightarrow$ Query / plan-conditioned $S(U \mid Q, p)$

$S(U) = \langle A_U, B_U, P_U, D_U, E_U, \Omega_U \rangle$

amplification • branch/path • dependence
data access • effects • provenance/uncertainty/coverage

Selected components instantiated;
complete six-field interface and
end-to-end integration not implemented

Reading rule: information is actionable only if it survives every handoff to a consumer with relevant decision reach.

Solid = complete observed chain • dashed = measured boundary • dotted = artifact boundary
